

## Small Biz Server

This is the beautiful thing about running a small business in the 21st century&mdash;you don't have to pay top dollar or settle for second best anymore. MyIntellects offers a full-featured desktop-to-server solution running on Linux&mdash;all at a fraction of the cost of competing solutions. Reap the benefits of open source and get what you need to compete.

### Big Biz Tools

Is your organization ready to enjoy all the benefits of big-business software? Now you can&mdash;and without draining your budget. MyIntellects Small Biz Server gives you a comprehensive, flexible solution with benefits from the server room to the desktop. You get a complete stack of full-featured software to boost your productivity.

- Enterprise Server components&mdash;a set of advanced management, storage and printing services
- Linux Server&mdash;an enterprise-class Linux server to run mission critical applications
- Mail Server&mdash;a personal-productivity dashboard that provides secure and reliable e-mail and calendaring
- 
- OpenOffice&mdash;a full-featured open source productivity suite that runs on Windows or Linux
- 
- Linux Desktop&mdash;a business-ready Linux desktop to support office applications

Small Biz Server is based on Linux Server, which lets you take full advantage of the extra processing power, added memory capabilities and improved power and cooling savings offered by 64-bit dual-core and multi-core processors from Intel and AMD.

The Suite delivers the essential components needed for any competitive business and also features an integrated installation process to minimize the time and cost of deployment.

### Small Biz Server Prices

Small Biz Server is priced aggressively, a stark contrast to the high licensing costs of all-proprietary software stacks. In fact, one Small Biz Server supports up to 200 users, while Microsoft Small Business Server supports only 75 users per license. And if you purchase Microsoft Small Business Server 2008, you&rsquo;ll have to purchase Microsoft Office separately. The edition of OpenOffice.org&mdash;which runs on both Windows and Linux desktops provides 90 percent of the same functionality as Microsoft Office, supports Microsoft Office formats, and is included at no extra cost.

Unlike the Microsoft alternative, with Small Biz Server you're entitled to deploy up to 5 physical servers to host collaboration services or any application that supports Linux Server. You can also install an unlimited number of virtualized Linux Server guests (limited only by hardware).

You can save up to 80 percent on your software acquisition costs by selecting Small Biz Server instead of a Windows-centric environment from Microsoft.
